

Made in America Initiative

Putting American Manufacturers First

Understanding the challenges faced by American small manufacturers, we created this initiative to help revitalize American industry – cutting regulation, expanding access to capital, promoting workforce development, and creating a dedicated infrastructure to support small manufacturers.

How we can help

- **Increasing Access to Capital:** We are committed to reducing the capital barriers for small manufacturers. SBA guaranteed loans may be available for loans up to \$5 million. Visit sba.gov/lendermatch to find a participating SBA lender.
- **Making Connections:** Our new onshoring portal at sba.gov/onshoring is a free resource connecting businesses with verified U.S. manufacturers, producers, and suppliers with a goal to bring manufacturing back.
- **Providing Training:** We are issuing up to \$1.1 million in grants to three eligible applicants to provide training and technical assistance to small manufacturers – targeting key industries such as timber, energy, aluminum, and steel.
- **Local Listening Sessions:** We are hosting nationwide roundtable discussions to share information about SBA resources and learn about ways that SBA can help American manufacturers expand their operations.
